### **Ultra Gro Control Benefits**

Fertilizer that adds protection. In a "thrombosis program" type-approach, inclusion of Ultra Gro Control to maximize plant potential will: optimize plant health through nutrition and disease prevention. **Specifications:**

- Has phosphite and mono potassium phosphate
- Allows one shot to deliver highly available NPK and protection
- Growers have seen significant gains in yield due to increased plant health and natural plant defense
- Application as a foliar allows systemic uptake throughout the plant
- Application rate is 1 pint to 1 quart per acre
- Timing recommendation - 2 shots in spring and 1 shot in the fall
- 2X catalyst makes the phosphite and mono potassium phosphate much more active, allowing for reduced application rates

**This product is not a fungicide**
